EPZ GROUNDING

"This class and the way it is taught will save lives" - 35-year Journeyman,
Bonneville Power Administration

"Everyone working in a substation or working on a line crew should take this course"
- Journeyman, Douglas PUD

"This is the best electrical class I have ever had" 15-year Journeyman, Clark PUD

This experiential training course is specifically designed to help lineworkers and substation workers understand the importance of protective bonding and grounding. By utilizing a variety of presentation materials and teaching methods, content delivery appeals to a wider audience with diverse learning styles. Each session is tailored to the specific learning environment and the education and experience of the learners. This is not an attempt to bluster learners with electrical engineering principles or bore them to death with a slide deck. PowerPoint training retention is very low; this evidence-based, interactive approach is much more effective.
