ELECTRICAL SAFETY FOR TELECOM WORKERS

This training course is designed to help telecom workers understand electrical system hazards, precautionary techniques, rescue, assessment and relevant safety regulations. It is specifically designed for field level personnel. By utilizing a variety of presentation materials content delivery appeals to a wider audience of diverse learning styles. This also allows each session to be tailored to the specific learning environment and the education and experience of learners. Awareness and engagement are critical in a dynamic environment. It is critical to cover items in a manner that establishes the significance of bonding and grounding practices and improves on the job discussion and performance.

Covers NESC, OSHA, state requirements, and best practices
