

ELECTRICAL SAFETY TRAINING SOLUTIONS

Maximum class size: 20 students

TEST INSTRUMENTS & TROUBLESHOOTING

One of the most significant tasks performed by a lineworker is the troubleshooting process. This is a utility operation where hazards easily go unrecognized, customer relationships can be damaged, and substantial material loss may occur. Helping lineworkers develop or enhance troubleshooting skills makes them safer on the job and better equipped for customer interaction.

Whenever a truck rolls, a safe and successful completion should be our aim.

Ideally, this is a multi-day class (2 - 4 days), though it can be limited to one day to address very specific needs.

Feedback from recent students:

"Brady makes me as a journeyman want to become better at my craft!"

"We need more training like this. Brady is very knowledgeable and he speaks lineman."
